

To save a grid data set

All grid data sets underlying the grid themes resulting from the operations in the Analysis and Surface menu are temporary. If you delete one of these grid themes, the underlying data set is deleted. To save one of these grid data sets so that it can be accessible to other users or for other projects, use the following steps:

- 1 Activate the grid theme from which to save the underlying data set.
- 2 From the Theme menu, choose Save Data Set.
- 3 Navigate to the directory in which to save the data set.
- 4 Enter the name of the grid data set in the Grid Name type-in box. Press OK.

When you save the grid data set to another directory and under a different name, the grid theme in the view is automatically updated. Saving the project will also change all temporary grid data sets in the project to permanent.

Use Properties in the Theme menu to check the status of the underlying grid data set of a grid theme.

Use Manage Data Sources from the File menu to delete any permanent grid data sets.
