

## Converting raster and vector data sources

In the raster domain, certain functions, such as Map Query and Map Calculator, only work on grids. Because of this, you may find the need to convert images to grid data sources.

For layout, or to share data with people who don't have the ability to read grid themes, you may also need to convert grid data sources to feature data sources.

### What type of conversion do you want to perform?

- [»| Feature theme to grid theme](#)
- [»| Image theme to grid theme](#)
- [»| Grid theme to polygon feature theme](#)
