
Appendix A: MicroStation Descartes Key-in Tables

Overview

This appendix provides a comprehensive list of the MicroStation Descartes key-ins. More than 1200 key-ins are listed and defined.

The list is broken into key-in tables. An additional table presents the file formats and file types that are supported in MicroStation Descartes. Here is a description of the contents of each table.

New Key-ins in MicroStation Descartes Version 7

This section lists all the new key-ins introduced in Version 7, see “New Key-ins in MicroStation Descartes Version 7” on page A-5.

MicroStation Descartes Key-ins

This section lists all key-ins prior to Version 7, see “MicroStation Descartes Key-ins” on page A-47.

Project Key-ins

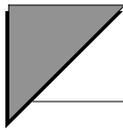

These key-ins begin with IMG.

The Project Key-ins table contains the key-ins for managing the image project, for getting help and for exiting MicroStation Descartes.

See “Project Key-ins” on page A-47

Image Edit Key-ins

These key-ins begin with IMGEDIT.

The Image Edit Key-ins table contains the key-ins working with:

- All features described in chapter 6, Enhancing Images;
- All tools of the Local Transform tool box, described in chapter 7;
- All features described in chapter 9, Preparing and Managing Color Filters;
- All features described in chapter 10, Editing Images.

See “Image Edit Key-ins” on page A-52.

Image Manager Key-ins

These key-ins begin with IMGMANAGER.

The Image Manager Key-ins table contains the key-ins working with:

- All features described in chapter 5, Displaying Images with Image Manager;
- All features described in chapter 14, Converting Image Formats;
- All features described in chapter 15, Plotting and Printing Images.

See “Image Manager Key-ins” on page A-93.

Image File Formats

This table gives a comprehensive list of all file formats and file types that are supported in MicroStation Descartes. Supported data compression types are also listed. Choose the appropriate options in this table for completing the following key-ins in the Image Manager Key-ins table:

Key-in: IMGMANAGER BATCHCONVER SETOUTPUTSETTING
<Extension> <Pixel Type> <Compression>
<Directory>

Key-in: IMGMANAGER SAVEAS SETOUTPUTSETTING
<Extension> <Pixel Type> <Compression>

See “Image File Formats” on page A-120

Register Key-ins

These key-ins begin with IMGREGISTER.

The Register Key-ins table contains the key-ins working with all features described in chapter 8, Registering Images and Vector Data.

See “Register Key-ins” on page A-122.

Theme Key-ins

These key-ins begin with IMGTHEME.

The Theme Key-ins table contains the key-ins working with all features described in chapter 11, Preparing Theme Symbology.

See “Theme Key-ins” on page A-144.

Image Transform Key-ins

These key-ins begin with IMGTRANSFORM.

The Image Transform Key-ins table contains the key-ins working with all tools of the Image Transform tool box, described in chapter 7.

See “Image Transform Key-ins” on page A-171.

Vectorize Key-In

These key-ins begin with IMGVECTORIZE.

The Vectorize Key-ins table contains the key-ins working with:

- All features described in chapter 12, Vectorizing;
- All features described in chapter 13, Converting Text and Cells from Raster to Vector.

See “Vectorize Key-In” on page A-176.

Generic Plot Key-ins

These key-ins begin with IMGGENPLOT.

The Generic Plot Key-ins table contains the key-ins working with generic features described in chapter 15, Plotting and Printing Images.

See “Generic Plot Key-ins” on page A-191.

- ☞ For using the Generic Plot Key-ins, the current plot driver must be “dcgen.plt.” To load this driver, choose Driver in the Setup menu of the Plot dialog box, and select its name in the dialog box that displays.

PostScript Plot Key-ins

These key-ins begin with IMGPSLOT.

The PostScript Plot Key-ins table contains the key-ins working with PostScript features described in chapter 15, Plotting and Printing Images.

See “PostScript Plot Key-ins” on page A-194.

- ☞ For using the PostScript Plot Key-ins, the current plot driver must be “dcps.plt”. To load this driver, choose Driver in the Setup menu of the Plot dialog box, and select its name in the dialog box that displays.

RTL Plot Key-ins

These key-ins begin with IMGRTLLOT.

The RTL Plot Key-ins table contains the key-ins working with the RTL features described in chapter 15, Plotting and Printing Images.

See “RTL Plot Key-ins” on page A-198.

- ☞ For using the RTL Plot Key-ins, the current plot driver must be “dctrl.plt.” To load this driver, choose Driver in the Setup menu of the Plot dialog box, and select its name in the dialog box that displays.

New Key-ins in MicroStation Descartes Version 7

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHA GETRES- AMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resam- pling status for the creation of a Img (24 bits) file.	Image Manager > File > Batch Con- version
IMGMANAGER BATCHA SETRES- AMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the cre- ation of a Img (24 bits) file.	Image Manager > File > Batch Con- version
IMGMANAGER BATCHA SETRES- AMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the cre- ation of a Img (24 bits) file.	Image Manager >File > Batch Con- version
IMGMANAGER BATCHA SETLO- CATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference infor- mation. The valid value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Con- version
IMGMANAGER BATCHA GETLO- CATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference infor- mation. The return value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Con- version
IMGMANAGER BATCHBMP GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resam- pling status for the creation of a Win- dows BMP file.	Image Manager > File > Batch Con- version

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHBMP SET- RESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a Windows BMP file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHBMP SET- RESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a Windows BMP file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHBMP SET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference information. The valid value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHBMP GET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference information. The return value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHCAL GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a CALS file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHCAL SET- RESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a CALS file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHCAL SET- RESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a CALS file.	Image Manager > File > Batch Conversion

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHCAL SET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference infor- mation. The valid value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHCAL GET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference infor- mation. The return value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHCIT GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resam- pling status for the creation of a Inter- graph CIT file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHCIT SETRE- SAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the cre- ation of a Intergraph CIT file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHCIT SETRE- SAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the cre- ation of a Intergraph CIT file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHCOT GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resam- pling status for the creation of a Inter- graph COT file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHCOT SET- RESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the cre- ation of a Intergraph COT file.	Image Manager > File > Batch Conver- sion

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHCOT SET- RESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a Intergraph COT file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHHMR GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a HMR file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHHMR SET- RESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a HMR file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHHMR SET- RESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a HMR file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHJPG GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a JPEG file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHJPG SETRE- SAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a JPEG file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHJPG SETRE- SAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a JPEG file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHJPG SET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference information. The valid value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHJPG GET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference infor- mation. The return value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHP GETRES- AMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resam- pling status for the creation of a Img file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHP SETRESA- MPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the cre- ation of a Img file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHP SETRESA- MPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the cre- ation of a Img file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHP SETLO- CATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference infor- mation. The valid value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHP GETLO- CATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference infor- mation. The return value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHPCX GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resam- pling status for the creation of a PCX file.	Image Manager > File > Batch Conver- sion

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHPCX SET- RESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a PCX file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHPCX SET- RESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a PCX file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHPCX SET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference information. The valid value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHPCX GET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference information. The return value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHRGB GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a Intergraph RGB file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHRGB SET- RESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a Intergraph RGB file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHRGB SET- RESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a Intergraph RGB file.	Image Manager > File > Batch Conversion

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHRGB SET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference infor- mation. The valid value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHRGB GET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference infor- mation. The return value for location format string are: "HGR" and "World- File".	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHRLE GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resam- pling status for the creation of a Inter- graph RLE file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHRLE SETRE- SAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the cre- ation of a Intergraph RLE file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHRLE SETRE- SAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the cre- ation of a Intergraph RLE file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHRS GETRE- SAMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resam- pling status for the creation of a Sun Raster file.	Image Manager > File > Batch Conver- sion
IMGMANAGER BATCHRS SETRES- AMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the cre- ation of a Sun Raster file.	Image Manager > File > Batch Conver- sion

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHRS SETRESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a Sun Raster file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHRS SETLOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference information. The valid value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHRS GETLOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference information. The return value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTG4 GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a Intergraph TG4 file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTG4 SETRESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a Intergraph TG4 file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTG4 SETRESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a Intergraph TG4 file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTGA GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a Targa file.	Image Manager > File > Batch Conversion

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHTGA SET- RESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a Targa file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTGA SET- RESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a Targa file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTGA SET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference information. The valid value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTGA GET- LOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference information. The return value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTIF GET- GCS	Output: [STRING]	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Get the Geographic Coordinate System name used for the creation of a GeoTiff file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTIF GET- PROJECTION	Output: [STRING]	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Get the Projection name used for the creation of a GeoTiff file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTIF GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a TIFF file.	Image Manager > File > Batch Conversion

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BATCHTIF SET- GCS	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Set the Geographic Coordinate System name used for the creation of a GeoTiff file. The Geographic Coordinate System name must be present in the file geotifcs.cfg.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTIF SET- PROJECTION	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Set the Projection name used for the creation of a GeoTiff file. The Projection name must be present in the file geotifcs.cfg.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTIF SETRE- SAMPLEDDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a TIFF file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTIF SETRE- SAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a TIFF file.	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTIF SETLO- LOCATION [location format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference information. The valid value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER BATCHTIF GET- LOCATION [locat ion format]	Input: [STRING]	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference information. The return value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER BSAVEASRLE GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a Intergraph RLE file.	Image Manager > File > Save As
IMGMANAGER DISPLAY GET- GLOBALFIT	Input: NONE Out- put: SHORT	KIN_INVALID_P AM KIN_ERROR KIN_SUCCESS	Returns the status of the Fit All Images and Design Elements to View.	
IMGMANAGER DISPLAY SETGLO- BALFITON	Input: NONE	KIN_SUCCESS KIN_ERROR	Set the status of the toggle Fit All Images and Design Elements to ON.	
IMGMANAGER DISPLAY SETGLO- BALFITOFF	Input: NONE	KIN_SUCCESS KIN_ERROR	Set the status of the toggle Fit All Images and Design Elements to OFF.	
IMGMANAGER DISPLAY GLO- BALFIT	Input: [SHORT]	KIN_SUCCESS KIN_ERROR	Fits all visible image and all design elements to a view. If view is not specified, a data point is required to identify the desired view.	
IMGMANAGER DISPLAY Recon- nect <view num- ber> [file name]	Input: SHORT [STRING]	KIN_INVALID_VIE W KIN_ERROR KIN_SUCCESS KIN_FILE_NOT_F OUND KIN_PERM_DENIE D	Tries to reconnect the specified image in the specified view. If no filename is specified, tries to reconnect the selected images in the specified view.	Image Manager > Display> Reconnect
IMGMANAGER DLGCACHESET- TING OPEN	NONE	KIN_ERROR KIN_PERM_DENIE D KIN_SUCCESS	Opens the Internet Client Cache Settings dialog.	Image Manager > Settings > Prefer- ences > MSI Client Cache

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER DLGSERVERSET- TING CLOSE	NONE	KIN_ERROR KIN_SUCCESS KIN_PERM_DENIE D	Closes the Image Servers Settings dia- log.	Image Manager > File> Settings > Image Servers
IMGMANAGER DLGSERVERSET- TING OPEN	NONE	KIN_ERROR KIN_PERM_DENIE D KIN_SUCCESS	Opens the Image Servers Setting dia- log.	Image Manager > File> Settings > Image Servers
IMGMANAGER INTERNETCACHE GETCACHINGTH- RESHOLD (thresh- old)	Output: LONG	KIN_ERROR KIN_PERM_DENIE D KIN_SUCCESS	Returns the mini- mum file size of the file to put in the cache. (in Kb)	Image Manager > Settings > Prefer- ences > MSI Client Cache
IMGMANAGER INTERNETCACHE GETDIRECTORY (directory)	Output: STRING	KIN_INVALID_PAR AM KIN_SUCCESS KIN_PERM_DENIE D	Returns the HIP local cache directory.	Image Manager > Settings > Prefer- ences > MSI Client Cache
IMGMANAGER INTERNETCACHE GETDISKMAX- SIZE (size)	Output: LONG	KIN_ERROR KIN_PERM_DENIE D KIN_SUCCESS	Returns the maxi- mum size of the disk cache. (in Mb)	Image Manager > Settings > Prefer- ences > MSI Client Cache
IMGMANAGER INTERNETCACHE GETMEMORY- MAXSIZE (size)	Output: LONG	KIN_ERROR KIN_PERM_DENIE D KIN_SUCCESS	Returns the maxi- mum size of the memory cache. (in Mb)	Image Manager > Settings > Prefer- ences > MSI Client Cache
IMGMANAGER INTERNETCACHE SETCACHINGTH- RESHOLD <thresh- old>	Input: LONG	KIN_ERROR KIN_PERM_DENIE D KIN_INVALID_PAR AM KIN_SUCCESS	Sets the minimum file size of the file to put in the cache. (in Kb)	Image Manager > Settings > Prefer- ences > MSI Client Cache
IMGMANAGER INTERNETCACHE SETDIRECTORY <directory>	Input: STRING	KIN_ERROR KIN_INVALID_PAR AM KIN_SUCCESS KIN_PERM_DENIE D	Sets the HIP local cache directory.	Image Manager > Settings > Prefer- ences > MSI Client Cache

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER INTERNETCACHE SETDISKMAXSIZE <size>	Input: LONG	KIN_ERROR KIN_PERM_DENIE D KIN_SUCCESS	Sets the maximum size of the disk cache. (in Mb)	Image Manager > Settings > Preferences > MSI Client Cache
IMGMANAGER INTERNETCACHE SETMEMORYMAX- SIZE <size>	Input: LONG	KIN_ERROR KIN_PERM_DENIE D KIN_SUCCESS	Sets the maximum size of the memory cache. (in Mb)	Image Manager > Settings > Preferences > MSI Client Cache
IMGMANAGER LOCATION GETAFFANGLE (angle)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Returns the affinity angle recorded in the active image.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION GET- PIXELSIZELOCK (status)	Output: SHORT	KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Returns the status of the pixel size lock.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION GET- PIXELSIZEX (size)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Returns the pixel width recorded in the active image.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION GET- PIXELSIZEY (size)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Returns the pixel height recorded in the active image.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION GETROTANGLE (angle)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Returns the rotation angle recorded in the active image.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION GETSCALEFAC- TOR (value)	Ouput: DOUBLE	KIN_NOIMAGE KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Returns the scale factor for the active image.	Image Manager > Tools > Image Transform

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER LOCATION SET- AFFANGLE <angle>	Input: STRING	KIN_NOIMAGE KIN_FILE_READ_ ONLY KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Sets the affinity angle to record into the active image.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION SETD- PIX <value>	Input: LONG	KIN_NOIMAGE KIN_FILE_READ_ ONLY KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Set the dpi about the X-axis for the active image.	Image Manager > File> Properties > Location
IMGMANAGER LOCATION SETD- PIY <value>	Input: LONG	KIN_NOIMAGE KIN_FILE_READ_ ONLY KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Set the dpi about the Y-axis for the active image.	Image Manager > File> Properties > Location
IMGMANAGER LOCATION SET- PIXELSIZELOCK- OFF (status)	NONE	KIN_SUCCESS KIN_ERROR	Sets the status of the pixel size lock to OFF.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION SET- PIXELSIZE- LOCKON (status)	NONE	KIN_SUCCESS KIN_ERROR	Sets the status of the pixel size lock to ON.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION SET- PIXELSIZEEX <size>	Input: STRING	KIN_NOIMAGE KIN_FILE_READ_ ONLY KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Sets the pixel width to record into the active image.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION SET- PIXELSIZEY <size>	Input: STRING	KIN_NOIMAGE KIN_FILE_READ_ ONLY KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Sets the pixel height to record into the active image.	Image Manager > File > Properties > Location

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER LOCATION SET- ROTANGLE <angle>	Input: STRING	KIN_NOIMAGE KIN_FILE_READ_ ONLY KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Sets the rotation angle to record into the active image.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION SET- SCALEFACTOR <value>	Input: DOUBLE	KIN_NOIMAGE KIN_FILE_READ_ ONLY KIN_INVALID_PAR AM KIN_ERROR KIN_SUCCESS	Set the scale factor of the active image.	Image Manager > Tools > Image Trans- form
IMGMANAGER NEWIMAGE GETAFFANGLE (Rotation angle)	Output: STRING	KIN_INVALID_PAR AM KIN_SUCCESS	Returns the affinity angle of the new image.	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE GET- DPIY (value)	Ouput: LONG	KIN_INVALID_PAR AM KIN_SUCCESS	Returns the dpi Y of the new image.	Idem
IMGMANAGER NEWIMAGE GET- PIXELSIZE X (Pix- elSize X)	Output: STRING	KIN_INVALID_PAR AM KIN_SUCCESS	Returns the pixel size X of the new image in Working units. (ex: 1:150.000)	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE GET- PIXELSIZE Y (Pix- elSize Y)	Output: STRING	KIN_INVALID_PAR AM KIN_SUCCESS	Returns the pixel size Y of the new image in Working units. (ex: 1:150.000)	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE GETROTANGLE (Rotation angle)	Output: STRING	KIN_INVALID_PAR AM KIN_SUCCESS	Returns the rotation angle of the new image.	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE GETSCALEFAC- TOR (value)	Ouput: DOUBLE	KIN_INVALID_PAR AM KIN_SUCCESS	Returns the scale factor of the new image.	Idem

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER NEWIMAGE SET- AFFANGLE <Affin- ity angle>	Input: STRING	KIN_INVALID_PAR AM KIN_SUCCESS	Sets the affinity angle of the new image.	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE SETD- PIX <value>	Input: LONG	KIN_INVALID_PAR AM KIN_SUCCESS	Set the dpi X of the new image.	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE SETD- PIY <value>	Input: LONG	KIN_INVALID_PAR AM KIN_SUCCESS	Set the dpi Y of the new image.	Idem
IMGMANAGER NEWIMAGE SET- PIXELSIZE X <Pix- elSize X>	Input: STRING	KIN_INVALID_PAR AM KIN_SUCCESS	Sets the pixel size X of the new image in Working units. (ex: 1:150.000)	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE SET- PIXELSIZE Y <Pix- elSize Y>	Input: STRING	KIN_INVALID_PAR AM KIN_SUCCESS	Sets the pixel size Y of the new image in Working units. (ex: 1:150.000)	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE SET- ROTANGLE <Rota- tion angle>	Input: STRING	KIN_INVALID_PAR AM KIN_SUCCESS	Sets the rotation angle of the new image.	Image Manager > File > New > Loca- tion
IMGMANAGER NEWIMAGE SET- SCALEFACTOR <value>	Input: DOUBLE	KIN_INVALID_PAR AM KIN_SUCCESS	Sets the scale factor of the new image.	Idem
IMGMANAGER PLOTINVERTBW GET	Output: SHORT	KIN_INVALID_PAR AM KIN_SUCCESS	Return the status of the black and white 1 bit plot inversion.	
IMGMANAGER PLOTINVERTBW SETOFF	NONE	KIN_SUCCESS	Disable inversion of 1 bit black and white images.	
IMGMANAGER PLOTINVERTBW SETON	NONE	KIN_SUCCESS	Enable inversion of 1 bit black and white images.	

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER SAVEASA GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a Img (24 bits) file.	Image Manager > File > Save As
IMGMANAGER SAVEASA SETRESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a Img (24 bits) file.	Image Manager > File > Save As
IMGMANAGER SAVEASA SETRESAMPLEDON	NONE	KIN_SUCCESS	Sets the resampling to ON for the creation of a Img (24 bits) file.	Image Manager > File > Save As
IMGMANAGER SAVEASA SETLOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Set the location file format used to store georeference information. The valid value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER SAVEASA GETLOCATION [location format]	Input: [STRING]	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Get the location file format used to store georeference information. The return value for location format string are: "HGR" and "World-File".	Image Manager > File > Batch Conversion
IMGMANAGER SAVEASBMP GETRESAMPLED (status)	Output: SHORT	KIN_INVALID_PARAMETER KIN_ERROR KIN_SUCCESS	Returns the resampling status for the creation of a Windows BMP file.	Image Manager > File > Save As
IMGMANAGER SAVEASBMP SETRESAMPLEDOFF	NONE	KIN_SUCCESS	Sets the resampling to OFF for the creation of a Windows BMP file.	Image Manager > File > Save As

Project Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMG DLGPROJECT CLOSE	NONE	KIN_SUCCESS	Closes the Project Settings dialog.	Image Manager> Settings > Project
IMG DLGPROJECT OPEN	NONE	KIN_SUCCESS	Opens the Project Settings dialog.	Image Manager> Settings > Project
IMG FULLPATH SETOFF	NONE	KIN_SUCCESS	Sets the status of the Save Full Path feature to OFF.	Image Manager> Settings > Project > Save Full Path
IMG FULLPATH SETON	NONE	KIN_SUCCESS	Sets the status of the Save Full Path feature to ON.	Image Manager> Settings > Project > Save Full Path
IMG FULLPATH TOGGLE	NONE	KIN_SUCCESS	Toggles the status of the Save Full Path feature.	Image Manager> Settings > Project > Save Full Path
IMG FULLPATH GET (status)	Output: SHORT	KIN_ERROR KIN_SUCCESS	Returns the status (ON/OFF) of the Save Full Path feature.	Image Manager> Settings > Project > Save Full Path
IMG LANGUAGE GET (language)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the first letter of the currently language set.	
IMG MAINVERSION GET (version) (sub- version) (revision) (subrevision) [(fla- vor)]	Output: SHORT SHORT SHORT SHORT [STRING]	KIN_INVALID_PARAM KIN_SUCCESS	Returns the current Descartes version, sub-version, revision, subrevision and if desired the flavor.	
IMG METERSPE- RUOR GET (factor)	Output: DOUBLE	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the number of meters per units of resolution.	
IMG PROJECT ATTACH	NONE	KIN_ERROR KIN_SUCCESS	Saves and attach the current project to the Master Design File.	Image Manager> File > Project > Attach

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMG PROJECT DETACH	NONE	KIN_ERROR KIN_SUCCESS	Detach any Descartes project file from the Master Design File.	Image Manager> File > Project > Detach
IMG PROJECT EXPORTRASTER-REF	NONE	KIN_ERROR KIN_SUCCESS	Detach all Images from the Image Manager list and attach them as raster reference to the current design file.	Image Manager> File > Project > Export Raster Reference
IMG PROJECT GET (name)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the name of the current project. If no project is opened the answer is "NONE".	
IMG PROJECT GETKEEPCURRENT	NONE	KIN_SUCCESS	Gets the status of the option for keeping the current project open when changing to a new design file that does not have any project attached.	
IMG PROJECT IMPORTRASTERREF	NONE	KIN_ERROR KIN_SUCCESS	Detach all raster reference attachments from the current design file and attach them to the Image Manager list.-	Image Manager> File > Project > Import Raster Reference
IMG PROJECT NEW	NONE	KIN_SUCCESS	Creates a new project with default settings.	Image Manager> File > Project > New
IMG PROJECT OPEN [filename]	Input: [STRING]	KIN_FILE_NOT_FOUND KIN_SUCCESS	Opens the specified project or open the file selector dialog if no file name is given.	Image Manager> File > Project > Open
IMG PROJECT SAVE	NONE	KIN_ERROR KIN_SUCCESS	Saves the current project.	Image Manager> File > Project > Save

MicroStation Descartes Key-in Tables

Project Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMG PROJECT SAVEAS [filename]	Input: [STRING]	KIN_FILE_EXIST KIN_ERROR KIN_SUCCESS	Saves the current project under the specified name or opens the file creation dialog if no file name is given. Note: Input Parameters must be given to get a valid returned error code.	Image Manager> File > Project > Save As
IMG PROJECT SET-KEEPCURRENTOFF	NONE	KIN_SUCCESS	Sets to OFF the option of keeping the current project open when no project is attached to the new design file.	
IMG PROJECT SET-KEEPCURRENTON	NONE	KIN_SUCCESS	Sets to ON the option of keeping the current project open when no project is attached to the new design file.	
IMG TOOLCNV-TOVECTOR CLOSE	NONE	KIN_SUCCESS	Closes the Convert To Vector tool frame.	Image Manager> Tools > Convert To Vector
IMG TOOLCNV-TOVECTOR OPEN	NONE	KIN_SUCCESS	Opens the Convert To Vector tool frame.	Image Manager> Tools > Convert To Vector
IMG TOOEDIT CLOSE	NONE	KIN_SUCCESS	Closes the Edit tool frame.	Image Manager> Tools > Edit
IMG TOOEDIT OPEN	NONE	KIN_SUCCESS	Opens the Edit tool frame.	Image Manager> Tools > Edit
IMG TOOLMAIN CLOSE	NONE	KIN_SUCCESS	Closes the Image Main tool frame.	Image Manager> Tools > Image Main

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMG TOOLMAIN OPEN	NONE	KIN_SUCCESS	Opens the Image Main tool frame.	Image Manager> Tools > Image Main
IMG TOOLPREPARE CLOSE	NONE	KIN_SUCCESS	Closes the Prepare tool frame.	Image Manager> Tools > Prepare
IMG TOOLPREPARE OPEN	NONE	KIN_SUCCESS	Opens the Prepare tool frame.	Image Manager> Tools > Prepare

Line number range from 0 to 15. Dashes and gaps are in pixel units ex: 1.5. Units mode must be set to PIXELS.	Image Manager > Settings > Stamp Vector
IMGEDIT STAMP SETLINEWEIGHT <LineNumber> <Weight>	Input: SHORT STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the line weight for the specified line number. Line number range from 0 to 15. Line weight are in working units ex: 10:50.000.	Image Manager > Settings > Stamp Vector
IMGEDIT STAMP SETLINEWEIGHT- PIXEL <LineNumber> <Weight>	Input: SHORT SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the line weight for the specified line number. Line number range from 0 to 15. Line weight are in pixel units; ex: 1.5. Units mode must be set to PIXELS.	Image Manager > Settings > Stamp Vector

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGEDIT STAMP SETSCALEFACTOR <value>	Input: DOUBLE	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the Scale Factor.	Image Manager > Settings > Stamp Vector
IMGEDIT STAMP SETUNITS < PIXELS WORKINGUNITS >	Input: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the units mode for the stamp settings. Units mode are: PIXELS and WORKINGUNITS.	Image Manager > Settings > Stamp Vector
IMGEDIT STAMP SETVIEW <viewNumber>	Input: SHORT	KIN_INVALID_VIEW KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the view number for stamping.	Image Manager > Tools > Stamp > Tool Settings
IMGEDIT STAMP VECTOR	NONE	KIN_ERROR KIN_SUCCESS	Activates the Stamp Vector command.	Image Manager > Tools > Stamp > Stamp Vector
IMGEDIT STAMP- PAUTO GET (status)	Output param.: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the status (ON/OFF) of Automatic Vector Stamping.	Image Manager > Settings > Stamp Vector
IMGEDIT STAMP- PAUTO SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set the status of Automatic Vector Stamping to OFF.	Image Manager > Settings > Stamp Vector
IMGEDIT STAMP- PAUTO SETON	NONE	KIN_ERROR KIN_SUCCESS	Set the status of Automatic Vector Stamping to ON.	Image Manager > Settings > Stamp Vector
IMGEDIT STAMP- CONFIRM SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Disable the confirming message to appear when a stamping operation will be done.	
IMGEDIT STAMP- CONFIRM SETON	NONE	KIN_ERROR KIN_SUCCESS	Enables the confirming message to appear when a stamping operation will be done.	
IMGEDIT STAMPCVT1TO8 SET- OFF	NONE	KIN_ERROR KIN_SUCCESS	Sets the conversion of 1 bit images in 8 bit images to OFF for stamping operations.	

MicroStation Descartes Key-in Tables

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER DISPLAY FRONT [view number] [filename]	Input: [SHORT], [STRING]	KIN_INVALID_VIEW KIN_FILE_NOT_FOUND KIN_NOIMAGE KIN_ERROR KIN_SUCCESS	Brings the specified image to the front in the selected view. If filename is not specified, applies to the selected images of the specified view. If view is not specified, a data point is required to identify the desired view. If no images are selected in this view, a data point is required to identify the desired image. Note: The first Input parameter must be given to get a valid returned error code.	Image Manager > Display> Bring to Front
IMGMANAGER DISPLAY GETONOFF <view number> [filename] (status)	Input: SHORT, [STRING] Output: SHORT	KIN_INVALID_PARAM KIN_INVALID_VIEW KIN_FILE_NOT_FOUND KIN_SUCCESS KIN_ERROR	Returns the status (ON/OFF) of the specified image in the selected view. Applies to the first selected images if no filename is specified.	
IMGMANAGER DISPLAY SETOFF [view number] [filename]	Input: SHORT, [STRING]	KIN_INVALID_VIEW KIN_FILE_NOT_FOUND KIN_INVALID_PARAM KIN_SUCCESS KIN_ERROR	Sets OFF the specified image in the selected view. Applies to the selected images of the specified view if no filename is specified. If no view is specified, a data point is required to identify the desired view.	Image Manager > Display> Image(s) Off

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER DISPLAY SETON [view number] [filename]	Input: SHORT, [STRING]	KIN_INVALID_VIEW KIN_FILE_NOT_ FOUND KIN_INVALID_PARAM KIN_SUCCESS KIN_ERROR	Sets ON the specified image in the selected view. Applies to the selected images of the specified view if no filename is specified. If no view is specified, a data point is required to identify the desired view and images.	Image Manager > Display > Image(s) On
IMGMANAGER DLGCOLORDIST OPEN	NONE	KIN_ERROR KIN_SUCCESS	Opens the Color Distribution dialog.	Image Manager > Settings > Preferences > Colors...
IMGMANAGER DLGGENERAL OPEN	NONE	KIN_ERROR KIN_SUCCESS	Opens the Properties General dialog.	Image Manager > File > Properties > General
IMGMANAGER DLGLOCATION OPEN	NONE	KIN_NOIMAGE KIN_ERROR KIN_SUCCESS	Opens the Image Location Editor dialog.	Image Manager > File > Properties > Location
IMGMANAGER DLGMEMORY OPEN	NONE	KIN_ERROR KIN_SUCCESS	Opens the Memory Allocation dialog.	Image Manager > Settings > Preferences > Memory
IMGMANAGER DLGPLOT OPEN	NONE	KIN_ERROR KIN_SUCCESS	Opens the Plot dialog.	Image Manager > File > Plot
IMGMANAGER DLGVIEW CLOSE	NONE	KIN_ERROR KIN_SUCCESS	Closes the View Image Attributes dialog.	Image Manager > Settings > View Image Attributes

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER DLGVIEW OPEN	NONE	KIN_ERROR KIN_SUCCESS	Opens the View Image Attributes dialog.	Image Manager > Settings > View Image Attributes
IMGMANAGER FILE BATCHCONVER <filename>	Input: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Convert the given file to a new file format. If no filename is specified, the Batch Conversion dialog is opened.	Image Manager > File > Batch Conversion
IMGMANAGER FILE CLOSE [view number] [filename]	Input: SHORT, [STRING]	KIN_INVALID_VIEW KIN_FILE_NOT_ FOUND KIN_NO_ACTIVE_FILE KIN_SUCCESS KIN_ERROR	Closes the specified image in the specified view. If no filename is specified, closes the selected images in the specified view. If no view is specified, a data point is required to identify the desired view	Image Manager > File> Close
IMGMANAGER FILE CLOSEALL	NONE	KIN_SUCCESS	Closes all images in all views.	Image Manager > File> Closeall
IMGMANAGER FILE NEW	NONE	KIN_SUCCESS KIN_ERROR	Opens the New Image dialog.	Image Manager > File> New...
IMGMANAGER FILE OPEN [filename]	Input: , STRING	KIN_INVALID_FILE_ NAME KIN_SUCCESS KIN_ERROR	Opens the specified image in the specified view. If no filename is specified, opens the Image File Selection dialog. Note: Input parameter must be given to get a valid returned error code.	Image Manager > File> Open...

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER FILE SAVE	NONE	KIN_FILE_READ_ONLY KIN_NO_ACTIVE_FILE KIN_ERROR KIN_SUCCESS	Saves the active image.	Image Manager > File > Save
IMGMANAGER FILE SAVEAS <filename>	Input: STRING	KIN_FILE_EXIST KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS KIN_NO_ACTIVE_FILE	Saves the active image under the specified name. If no filename is specified, opens the Image File Creation dialog.	Image Manager > File > Save as
IMGMANAGER IMAGE GETCOLORCOUNT <ColorIndex> (Count)	Input: SHORT Output: LONG	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the number of pixels count of the specified color index in the active image.	Image Manager > File > Properties > Histogram
IMGMANAGER IMAGE GETCOUNT < View> (Count)	Input: SHORT Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the number of images opened in the specified view.	
IMGMANAGER IMAGE GETFILENAME (FileName)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_INVALID_VIEW KIN_SUCCESS	Returns the file name of the active image.	Image Manager > File > Properties > General
IMGMANAGER IMAGE GETFORMAT (Format)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the file format of the active image.	Image Manager > File > Properties > General
IMGMANAGER IMAGE GETONOFF <view> (Status)	Input: SHORT Output: SHORT	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_INVALID_VIEW KIN_SUCCESS	Returns the status (ON/OFF). of the active image	Image Manager

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER IMAGE GETPALETTECOLOR <ColorIndex> (Red) (Green) (Blue)	Input: SHORT Output: SHORT SHORT SHORT	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the red, green and blue values for the specified color index in the color palette of the active image.	Image Manager > File > Properties > Color Table
IMGMANAGER IMAGE GETPALETTE SIZE (PaletteSize)	Output: SHORT	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the color palette size of the active image.	
IMGMANAGER IMAGE GETPIXELTYPE (PixelFormat)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the pixel type of the active image.	Image Manager > File > Properties > General
IMGMANAGER IMAGE GETTRANSLUCENCE <View><ColorIndex> (State)	Input: SHORT SHORT Output: SHORT	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the translucence state for the specified color index in palette of the active image for the specified view.	Image Manager > Utilities > Translucent Colors
IMGMANAGER IMAGE GETTRANSLUCENCE PERCENT <View> (Percent)	Input: SHORT Output: DOUBLE	KIN_NOIMAGE KIN_INVALID_VIEW KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the translucence percent value for the active image in the specified view.	Image Manager > Utilities > Translucent Colors
IMGMANAGER IMAGE GETTRANSPARENCE <View><ColorIndex> (State)	Input: SHORT SHORT Output: SHORT	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the transparency state for the specified color index in palette of the active image for the specified view.	Image Manager > Utilities > Transparent Colors
IMGMANAGER IMAGE GETXNBPIXELS (NbPixels)	Output: LONG	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the width of the active image in pixels.	Image Manager > File > Properties > Location

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER IMAGE GETYNB- PIXELS (NbPixels)	Output: LONG	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the height of the active image in pixels.	Image Manager > File > Properties > Location
IMGMANAGER IMAGE QUERY <View> (ImgList)	Input: SHORT Output: STRUCT	KIN_INVALID_VIEW KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns all the information related to the list of images opened in the specified view. The ImgList is defined in the imgquery.h file. See mdl\examples\imgquery for an example. NB: Available for MDL programming only.	
IMGMANAGER IMAGE QUERYFREE < ImgList >	Input: STRUCT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Free the memory allocated for the specified ImgList by the key-in IMGMANAGER IMAGE QUERY. NB: Available for MDL programming only.	
IMGMANAGER IMAGE SELECT [view number] [filename]	Input: [SHORT], [STRING]	KIN_INVALID_VIEW KIN_FILE_NOT_FOUND KIN_NOIMAGE KIN_ERROR KIN_SUCCESS	Selects the specified image in the specified view. If filename is not specified, selects all images of the specified view. If view is not specified, a data point is required to identify the desired view and image. Note: The first Input parameter must be given to get a valid returned error code.	Image Manager > Tools > Image Control > Select Images / Active Image
IMGMANAGER IMAGE SETOFF <view>	Input: SHORT	KIN_NOIMAGE KIN_INVALID_VIEW KIN_SUCCESS	Sets the status of the active image to OFF.	Image Manager

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER IMAGE SETON <view>	Input: SHORT	KIN_NOIMAGE KIN_INVALID_VIEW KIN_SUCCESS	Sets the status of the active image to ON.	Image Manager
IMGMANAGER IMAGE UNSELECT [view number] [filename]	Input: SHORT, STRING	KIN_INVALID_VIEW KIN_FILE_NOT_FOUND KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Deselects the specified image in the specified view. If filename is not specified, applies to the selected images of the specified view. If view is not specified, all the selected images of all views are deselected.	
IMGMANAGER LOCATION GETDESC (description)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the Location Description for the active image.	Image Manager > File > Properties > Location
IMGMANAGER LOCATION GETPIXSIZE (size)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the Pixel Size value for the active image.	Image Manager > File> Properties > Location
IMGMANAGER LOCATION GETXORIGIN (originX)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the X Origin value for the active image.	Image Manager > File> Properties > Location
IMGMANAGER LOCATION GETYORIGIN (OriginY)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the Y Origin value for the active image.	Image Manager > File> Properties > Location
IMGMANAGER LOCATION SETDESC <description>	Input: STRING	KIN_NOIMAGE KIN_FILE_READ_ONLY KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the Location Description for the active image. (e.g.: 1:50.000)	Image Manager > File> Properties > Location

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER LOCATION SETPIXSIZE <size>	Input: STRING	KIN_NOIMAGE KIN_FILE_READ_ONLY KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the Pixel Size value for the active image. (e.g.: 1:50.000)	Image Manager > File> Properties > Location
IMGMANAGER LOCATION SETXORIGIN <originX>	Input: STRING	KIN_NOIMAGE KIN_FILE_READ_ONLY KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the X Origin value for the active image. (e.g.: 100:10.000)	Image Manager > File> Properties > Location
IMGMANAGER LOCATION SETYORIGIN <originY>	Input: STRING	KIN_NOIMAGE KIN_FILE_READ_ONLY KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the Y Origin value for the active image. (e.g.: 100:10.000)	Image Manager > File> Properties > Location
IMGMANAGER MEMORY GETNUMFILETILES (count)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the number of Image File buffers.	Image Manager > Settings > Preferences > Memory
IMGMANAGER MEMORY GETNUMSCREENTILES (count)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the number of Screen Tile buffers.	Image Manager > Settings > Preferences > Memory
IMGMANAGER MEMORY GETXSIZESCREEN- TILED (X size)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the Size in the X axis of Screen Tile buffers. (e.g.: 256)	Image Manager > Settings > Preferences > Memory
IMGMANAGER MEMORY GETYSIZESCREEN- TILED (Y size)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the Size in the Y axis of Screen Tile buffers. (e.g.: 256)	Image Manager > Settings > Preferences > Memory
IMGMANAGER MEMORY SETNUMFILETILES <count>	Input: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the Number of file buffers for the active image. (e.g.: 20)	Image Manager > Settings > Preferences > Memory

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER MEMORY SETNUMSCREEN- TILES <count>	Input: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the Number of Screen Tile buffers. (e.g.: 20)	Image Manager > Settings > Preferences > Memory
IMGMANAGER MEMORY SETXSIZESCREEN- TILED <X size>	Input: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the Size in the X axis of Screen Tile buffers. (e.g.: 256)	Image Manager > Settings > Preferences > Memory
IMGMANAGER MEMORY SETYSIZESCREEN- TILED <Y size>	Input: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the Size in the Y axis of Screen Tile buffers. (e.g.: 256)	Image Manager > Settings > Preferences > Memory
IMGMANAGER NEWIMAGE GETBACKCOLOR (Red) (Green) (Blue)	Output: SHORT SHORT SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the background color of the new image.	Idem
IMGMANAGER NEWIMAGE GETCOLUMNS (columns)	Output: LONG	KIN_INVALID_PARAM KIN_SUCCESS	Returns the number of columns of the new image.	Idem
IMGMANAGER NEWIMAGE GETCOMPRESSION (Compression Type)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the compression mode of the new image.	Idem
IMGMANAGER NEWIMAGE GETDESCRIPTION (Description)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the description of the new image.	Idem
IMGMANAGER NEWIMAGE GETLOCKCOLROW (State)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the status of the locking option for columns and rows when in interactive place mode (ON/OFF).	Idem

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER NEWIMAGE GETLOCKPIXELSIZE (State)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the status of the locking option for the pixel size when in interactive place mode (ON/OFF).	Idem
IMGMANAGER NEWIMAGE GETPIXELSIZE (PixelSize)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the pixel size of the new image in Working units. (ex: 1:150.000)	Idem
IMGMANAGER NEWIMAGE GETPLACEMODE (Place Mode)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the place mode of the new image.	Idem
IMGMANAGER NEWIMAGE GETROW (rows)	Output: LONG	KIN_INVALID_PARAM KIN_SUCCESS	Returns the number of rows of the new image.	Idem
IMGMANAGER NEWIMAGE GETSAMEAS (FileName)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the file name of the image used as a template ("same as") for the new image.	Idem
IMGMANAGER NEWIMAGE GETTYPE (Type)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the type of the new image.	Idem
IMGMANAGER NEWIMAGE GETXORIGIN (Origin X)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns X the origin of the new image in Working units. (ex: 1:150.000)	Idem
IMGMANAGER NEWIMAGE GETYORIGIN (Origin Y)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the Y origin of the new image in Working units (ex: 1:150.000).	Idem

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER NEWIMAGE RESET	NONE	KIN_NOIMAGE KIN_SUCCESS	Resets the options of the new image to the value of the template ("same as") image.	Idem
IMGMANAGER NEWIMAGE SETBACKCOLOR < Red> < Green > < Blue >	Input: SHORT SHORT SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Sets the background color of the new image.	Idem
IMGMANAGER NEWIMAGE SETCOLUMNS <columns>	Input: LONG	KIN_INVALID_PARAM KIN_SUCCESS	Sets the number of columns of the new image.	Idem
IMGMANAGER NEWIMAGE SETCOMPRESSION < NONE DEFLATE PACKBITS CCITT3 CCITT4 >	Input: STRING	KIN_INVALID_PARAM KIN_PERM_DENIED KIN_SUCCESS	Sets the compression mode of the new image. If the type is "2COLORS", NONE, PACKBITS, CCITT3 and CCITT4 are available. If the type is "CONTINUOUSTONE", NONE and DEFLATE are available.	Idem
IMGMANAGER NEWIMAGE SETDESCRIPTION < Description >	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Sets the description of the new image.	Image Manager > File > New
IMGMANAGER NEWIMAGE SETLOCKCOLROW- OFF	NONE	KIN_ERROR KIN_SUCCESS	Sets the locking option of columns and rows to OFF when in interactive place mode.	Idem
IMGMANAGER NEWIMAGE SETLOCKCOLROW- ON	NONE	KIN_ERROR KIN_SUCCESS	Sets the locking option of columns and rows to ON when in interactive place mode.	Idem

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER NEWIMAGE SETLOCKPIXELSIZE OFF	NONE	KIN_ERROR KIN_SUCCESS	Sets the locking option of pixel size to OFF when in interactive place mode.	Idem
IMGMANAGER NEWIMAGE SETLOCKPIXELSIZE ON	NONE	KIN_ERROR KIN_SUCCESS	Sets the locking option of pixel size to ON when in interactive place mode.	Idem
IMGMANAGER NEWIMAGE SET- PIXELSIZE <PixelSize>	Input STRING	KIN_INVALID_PARAM KIN_SUCCESS	Sets the pixel size of the new image in Working units. (ex: 1:150.000)	Idem
IMGMANAGER NEWIMAGE SETPLACEMODE <LOCATION INTERACTIVE>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Sets the place mode of the new image.	Idem
IMGMANAGER NEWIMAGE SETROW <rows>	Input: LONG	KIN_INVALID_PARAM KIN_SUCCESS	Sets the number of rows of the new image.	Idem
IMGMANAGER NEWIMAGE SETSAMEAS [FileName]	Input: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Sets the file name of the image used as a template ("same as") for the new image. If no parameters are given, the file selection dialog is opened.	Idem
IMGMANAGER NEWIMAGE SETTYPE < 2COLORS CONTINUOUS- TONE >	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Sets the type of the new image.	Idem

MicroStation Descartes Key-in Tables

Image Manager Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER NEWIMAGE SETX- ORIGIN <Origin-X>	Input: STRING	KIN_PERM_DENIED KIN_INVALID_PARAM KIN_SUCCESS	Sets the X origin of the new image when the place mode is LOCATION. OriginX is in Working units (ex: 1:150.000).	Idem
IMGMANAGER NEWIMAGE SETY- ORIGIN <OriginY>	Input: STRING	KIN_PERM_DENIED KIN_INVALID_PARAM KIN_SUCCESS	Sets the Y origin of the new image when the place mode is LOCATION. OriginY is in Working units (ex: 1:150.000).	Idem
IMGMANAGER OPEN GETVIEW (view list)	Output: STRING	KIN_ERROR KIN_SUCCESS	Returns the views in which the image will be opened.	Image Manager > File> Open
IMGMANAGER OPEN SETVIEWOFF <view list>	Input: SHORT list	KIN_INVALID_VIEW KIN_ERROR KIN_SUCCESS	Sets the views to OFF in which the image will be opened (ex: 1,2-4,8 for 1,2,3,4,8).	Image Manager > File> Open
IMGMANAGER OPEN SETVIEWON <view list>	Input: SHORT list	KIN_INVALID_VIEW KIN_ERROR KIN_SUCCESS	Sets the views to ON in which the image will be opened (ex: 1,2-4,8 for 1,2,3,4,8).	Image Manager > File> Open
IMGMANAGER OPENCONFEXPORT GET	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the state (ON/OFF) of the opening warning dialog when the file can be opened but can not be modified.	Image Manager > File > Open
IMGMANAGER OPENCONFEXPORT SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Disables the opening of a warning dialog when the file can be opened but can not be modified.	Image Manager > File > Open
IMGMANAGER OPENCONFEXPORT SETON	NONE	KIN_ERROR KIN_SUCCESS	Enables the opening of a warning dialog when the file can be opened but can not be modified.	Image Manager > File > Open

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGMANAGER OPENCONFINVALID FILE GET	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the status (ON/OFF) of the opening warning dialog when the file is invalid.	Image Manager > File > Open
IMGMANAGER OPENCONFINVALID FILE SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Disables the opening of a warning dialog when the file is invalid.	Image Manager > File > Open
IMGMANAGER OPENCONFINVALID FILE SETON	NONE	KIN_ERROR KIN_SUCCESS	Enables the opening of a warning dialog when the file is invalid.	Image Manager > File > Open
IMGMANAGER OPENCONFMORE32 GETONOFF	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the status (ON/OFF) of the opening of a warning dialog when the image uses more than 32 colors.	Image Manager > File > Open
IMGMANAGER OPENCONFMORE32 GETYESNO	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the default response for the image compression to 32 colors.	Image Manager > File > Open
IMGMANAGER OPENCONFMORE32 SETNO	NONE	KIN_ERROR KIN_SUCCESS	Disables the color compression of the image when it uses more than 32 colors.	Image Manager > File > Open
IMGMANAGER OPENCONFMORE32 SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Disables the opening of a warning dialog when the image uses more than 32 colors.	Image Manager > File > Open
IMGMANAGER OPENCONFMORE32 SETON	NONE	KIN_ERROR KIN_SUCCESS	Enables the opening of a warning dialog when the image uses more than 32 colors.	Image Manager > File > Open

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGREGISTER COL-ORCTLPTS GETBASE (ColorNumber)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the Base Control Point color index.	Image Manager > Utilities > Register > Settings > Color for Control Points
IMGREGISTER COL-ORCTLPTS GETUNCORRECT (ColorNumber)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the Uncorrected Control Point color index.	Image Manager > Utilities > Register > Settings > Color for Control Points
IMGREGISTER COL-ORCTLPTS SETBASE <ColorNumber>	Input: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Sets the Base Control Point color index.	Image Manager > Utilities > Register > Settings > Color for Control Points
IMGREGISTER COL-ORCTLPTS SETUNCORRECT <ColorNumber>	Input: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Sets the Uncorrected Control Point color index.	Image Manager > Utilities > Register > Settings > Color for Control Points
IMGREGISTER CONTPT ADD [<State> <BaseX> <BaseY> <UncorX> <UncorY>]	Input: STRING STRING STRING STRING	KIN_INVALID_PARAM KIN_SUCCESS	Add a new control point to the current transformation model. If no parameters are specified, the "Add Control Points" dialog is opened. State can have the value "ON" or "OFF". Coordinates are in working units (ex: 1:150.000).	Image Manager > Utilities > Register > Edit > Add Control Points

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGREGISTER CONTPT DELETE	NONE	KIN_SUCCESS	Starts the Delete Control Points command.	Image Manager > Tools > Register
IMGREGISTER CONTPT DELETE-CURRENT	NONE	KIN_SUCCESS	Delete the current control point pair in the Register dialog.	Image Manager > Utilities > Register > Edit > Delete Control Points
IMGREGISTER CONTPT GETCOORDS (BaseX) (BaseY) (UncorX) (UncorY)	Output: STRING STRING STRING STRING	KIN_INVALID_PARAM KIN_SUCCESS	Returns the coordinates of the current control point in the Register dialog. Coordinates are in working units (ex: 1:150.000).	Image Manager > Utilities > Register
IMGREGISTER CONTPT GETCURRENT (PointNumber)	Output: LONG	KIN_INVALID_PARAM KIN_SUCCESS	Returns the number of the current control point. Numbers start at 1.	Image Manager > Utilities > Register
IMGREGISTER CONTPT GETONOFF (Status)	Output: SHORT	KIN_ERROR KIN_INVALID_PARAM KIN_SUCCESS	Returns the Status of the current control point. (ON/OFF).	Image Manager > Utilities > Register
IMGREGISTER CONTPT HIGHLIGHT	NONE	KIN_SUCCESS	Highlight the current control point.	Image Manager > Utilities > Register > Edit > Highlight Control Points
IMGREGISTER CONTPT LOCATE	NONE	KIN_SUCCESS	Locate the current control point in the views used to locate control points.	Image Manager > Utilities > Register > Edit > Locate Control Points

MicroStation Descartes Key-in Tables

Image Transform Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGTRANSFORM IMGVERSION GET (version) (subversion) (revision) (subrevision)	Output: SHORT SHORT SHORT SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the minimum required version, subversion, revision and subrevision of Descartes that can be used with this version of Image Transform.	
IMGTRANSFORM MERGE GETANGLE (angle)	Output: DOUBLE	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the stepping angle of rotation.	Image Manager > Tools > Image Transform
IMGTRANSFORM MERGE GETMETHOD (method)	Output: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the method used for selecting the area.	Image Manager > Tools > Image Transform
IMGTRANSFORM MERGE SETANGLE <angle>	Input: DOUBLE	KIN_INVALID_PARAM KIN_PERM_DENIED KIN_ERROR KIN_SUCCESS	Set the stepping angle of rotation. Only used if method is ORIENTEDBLOCK.	Image Manager > Tools > Image Transform
IMGTRANSFORM MERGE SETMETHOD <BLOCK ORIENTEDBLOCK ELEMENT >	Input: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the method used for selecting the area.	Image Manager > Tools > Image Transform
IMGTRANSFORM MIRROR GETAXE (axe)	Output: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the mirror type	Image Manager > Tools > Image Transform
IMGTRANSFORM MIRROR SETAXE <HORIZONTAL VERTICAL DOWNUPDIAGONAL UPDOWN- DIAGONAL >	Input: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the mirror type (HORIZONTAL or VERTICAL or DOWNUPDIAGONAL or UPDOWNDIAGONAL).	Image Manager > Tools > Image Transform

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGTRANSFORM ROTATE GETSPECANGLE (angle)	Output: DOUBLE	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the specified angle of rotation.	Image Manager > Tools > Image Transform
IMGTRANSFORM ROTATE GETSTEPANGLE (angle)	Output: DOUBLE	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the step angle of rotation.	Image Manager > Tools > Image Transform
IMGTRANSFORM ROTATE GETMETHOD (method)	Output: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the method used for specifying the rotated area and the angle of rotation (INTERACTIVE or SPECIFIED or 90DEGREES or 180DEGREES).	Image Manager > Tools > Image Transform
IMGTRANSFORM ROTATE GETORIENTATION (orientation)	Output: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the direction of the rotation (CLOCKWISE or COUNTER-CLOCKWISE).	Image Manager > Tools > Image Transform
IMGTRANSFORM ROTATE SETSPECANGLE <angle>	Input: DOUBLE	KIN_INVALID_PARAM KIN_PERM_DENIED KIN_ERROR KIN_SUCCESS	Set the angle of rotation. Only used if method is SPECIFIED.	Image Manager > Tools > Image Transform
IMGTRANSFORM ROTATE SETSTEPANGLE <angle>	Input: DOUBLE	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the step angle of rotation.	Image Manager > Tools > Image Transform
IMGTRANSFORM ROTATE SETMETHOD <INTERACTIVE SPECIFIED 90DEGREES 180DEGREES >	Input: STRING	KIN_ERROR KIN_SUCCESS	Set the method used for specifying the rotated area and the angle of rotation (INTERACTIVE or SPECIFIED or 90DEGREES or 180DEGREES).	Image Manager > Tools > Image Transform

MicroStation Descartes Key-in Tables

Image Transform Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGTRANSFORM ROTATE SETORIENTATION <CLOCKWISE COUNTER- CLOCKWISE>	Input: STRING	KIN_ERROR KIN_SUCCESS	Set the direction of the rotation (CLOCKWISE or COUNTERCLOCKWISE).	Image Manager > Tools > Image Transform
IMGTRANSFORM SCALE GETMETHOD (method)	Output: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the method used for specifying the scaling parameters (INTERACTIVE or SPECIFIED).	Image Manager > Tools > Image Transform
IMGTRANSFORM SCALE GETSCALE (value)	Output: DOUBLE	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the scaling value.	Image Manager > Tools > Image Transform
IMGTRANSFORM SCALE SETMETHOD <INTERACTIVE SPECIFIED>	Input: STRING	KIN_ERROR KIN_SUCCESS	Set the method used for specifying the scaling parameters (INTERACTIVE or SPECIFIED).	Image Manager > Tools > Image Transform
IMGTRANSFORM SCALE SETSCALE <value>	Input: DOUBLE	KIN_INVALID_PARAM KIN_PERM_DENIED KIN_ERROR KIN_SUCCESS	Set the scaling value. Only used if method is SPECIFIED.	Image Manager > Tools > Image Transform
IMGTRANSFORM SQUARE GETAXE (axe)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Get the axis mode used for specifying 2 points on an orthogonal line.	Image Manager > Tools > Image Transform
IMGTRANSFORM SQUARE SETAXE < HORIZONTAL VERTICAL >	Input: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the horizontal as the axis used for specifying 2 points on an orthogonal line.	Image Manager > Tools > Image Transform
IMGTRANSFORM TOOL CLOSE	NONE	KIN_SUCCES	Close Image Transform tool box.	Image Manager > Tools > Image Transform

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGTRANSFORM TOOL OPEN	NONE	KIN_ERROR KIN_SUCCESS	Opens Image Transform tool box.	Image Manager > Tools > Image Transform
IMGTRANSFORM VERSION GET (version) (subversion) (revision) (subrevision)	Output: SHORT SHORT SHORT SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the current version, subversion, revision and subrevision of the module Image Transform.	
IMGTRANSFORM WARP GETTRFMODEL (TrfModel)	Output: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Returns the transformation model used by Warp Image.	Image Manager > Tools > Image Transform
IMGTRANSFORM WARP SETTRFMODEL < AFFINE HELMERT PROJECTIVE SIMILITUDE >	Input: STRING	KIN_NOIMAGE KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the transformation model used by Warp Image.	Image Manager > Tools > Image Transform

Vectorize Key-In

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE ACTIVEZ GET (ActiveZ)	Output: DOUBLE	KIN_INVALID_PARAM KIN_SUCCESS	Return the current value of the active depth (Z) for the Convert Contour Lines command.	Image Manager > Tools > Vectorize > Convert Contour Lines
IMGVECTORIZE ACTIVEZ SET <ActiveZ>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the current value of the active depth (Z) for the Convert Contour Lines command.	Idem
IMGVECTORIZE ACTIVEZDIRECTION GET (Direction)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the current direction of the active depth (Z). Directions are UP and DOWN.	Idem
IMGVECTORIZE ACTIVEZDIRECTION SET <UP DOWN>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the current direction of the active depth (Z). Directions are UP and DOWN.	Idem
IMGVECTORIZE ACTIVEZINTERVAL GET (Interval)	Output: DOUBLE	KIN_INVALID_PARAM KIN_SUCCESS	Return the current interval for increasing/decreasing the active depth (Z).	Idem
IMGVECTORIZE ACTIVEZINTERVAL SET <Interval>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the current interval for increasing/decreasing the active depth (Z).	Idem
IMGVECTORIZE ACTIVEZLOCK GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the current status of the "Lock" option for the active depth (Z) (ON/OFF).	Idem
IMGVECTORIZE ACTIVEZLOCK SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set the current status of the "Lock" option for the active depth (Z) to OFF.	Idem

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE ACTIVEZLOCK SETON	NONE	KIN_ERROR KIN_SUCCESS	Set the current status of the "Lock" option for the active depth (Z) to ON.	Idem
IMGVECTORIZE AUTOCONTINUE GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the "Auto Continue" toggle (ON/OFF).	Image Manager > Tools > Vectorize > Tool Settings
IMGVECTORIZE AUTOCONTINUE SETOFF	NONE	KIN_SUCCESS	Set the status of the "Auto Continue" toggle to OFF.	Idem
IMGVECTORIZE AUTOCONTINUE SETON	NONE	KIN_SUCCESS	Set the status of the "Auto Continue" toggle to ON.	Idem
IMGVECTORIZE AUTOCONVERT GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the current status of "Auto Convert" (ON/OFF).	Image Manager > Tools > Vectorize > Tool Settings
IMGVECTORIZE AUTOCONVERT SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set the current status of "Auto Convert" to OFF.	Idem
IMGVECTORIZE AUTOCONVERT SETON	NONE	KIN_ERROR KIN_SUCCESS	Set the current status of "Auto Convert" to ON.	Idem
IMGVECTORIZE CELLAUTOERASECO LOR GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the "Auto Set Eraser Color" toggle (ON/OFF).	Image Manager > Tools > Text/Cells > Convert Cell
IMGVECTORIZE CELLAUTOERASE- COLOR SETOFF	NONE	KIN_SUCCESS	Set the status of the "Auto Set Eraser Color" toggle to OFF.	Idem
IMGVECTORIZE CELLAUTOERASECO LOR SETON	NONE	KIN_INVALID_PARAM KIN_SUCCESS	Set the status of the "Auto Set Eraser Color" toggle to ON.	Idem

MicroStation Descartes Key-in Tables

Vectorize Key-In

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE CELLERASERASTER GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the "Erase Raster" toggle (ON/OFF).	Idem
IMGVECTORIZE CELLERASERASTER SETOFF	NONE	KIN_SUCCESS	Set the status of the "Erase Raster" toggle to OFF.	Idem
IMGVECTORIZE CELLERASERASTER SETON	NONE	KIN_SUCCESS	Set the status of the "Erase Raster" toggle to ON.	Idem
IMGVECTORIZE CELLERASERCOLOR GET (Color)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the current eraser color.	Idem
IMGVECTORIZE CELLERASERCOLOR SET <Color>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the current eraser color.	Idem
IMGVECTORIZE CELLERASERCOLOR1 BIT GET (Color)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the current eraser color of 1 bit image.	Idem
IMGVECTORIZE CELLERASERCOLOR1 BIT SET < BACKGROUND FOREGROUND >	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the current eraser color for 1 bit image.	Idem
IMGVECTORIZE CELLFILTER GET (Filter)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the name of the current filter for the Convert Cell command.	Idem
IMGVECTORIZE CELLFILTER SET <Filter>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the filter for the Convert Cell command.	Idem

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE CELLTHEME GET (Theme)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the name of the current theme for the Convert Cell command.	Idem
IMGVECTORIZE CELLTHEME SET <Theme>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the theme for the Convert Cell command.	Idem
IMGVECTORIZE CONTINUE ELEMENT	NONE	KIN_SUCCESS	Start the Continue Element command.	Image Manager > Tools > Vectorize
IMGVECTORIZE CONVERT ALLCONNECTED- LINES	NONE	KIN_SUCCESS	Start the Convert All Connected Lines command.	Image Manager > Tools > Vectorize
IMGVECTORIZE CONVERT CELLS	NONE	KIN_SUCCESS	Start the Convert Cell command.	Image Manager > Tools > Text/Cells
IMGVECTORIZE CONVERT CELLSHORIZONTAL	NONE	KIN_SUCCESS	Start the Convert Horizontal Cell command.	Image Manager > Tools > Text/Cells
IMGVECTORIZE CONVERT CELLSORIENT	NONE	KIN_SUCCESS	Start the Convert Oriented Cell command.	Image Manager > Tools > Text/Cells
IMGVECTORIZE CONVERT CONTOURLINES	NONE	KIN_SUCCESS	Start the Convert Contour Lines command.	Image Manager > Tools > Vectorize
IMGVECTORIZE CONVERT LINES	NONE	KIN_SUCCESS	Start the Convert Lines command.	Image Manager > Tools > Vectorize
IMGVECTORIZE CONVERT TEXTALL	NONE	KIN_SUCCESS	Start the Convert Text command.	Image Manager > Tools > Text/Cells

IMGVECTORIZE DELETENODE SETAREA < NONE BLOCK ELEMENT FENCE IMAGE UN- LIMITED >	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the area type used by the Delete Nodes command. Area types are: NONE, BLOCK, ELEMENT, FENCE, IMAGE or UNLIMITED.	Idem
IMGVECTORIZE DLGSETTINGS OPEN	NONE	KIN_SUCCESS	Open the Vectorize Settings dialog.	Image Manager > Settings > Vectorize
IMGVECTORIZE FILENODE NEW	NONE	KIN_ERROR KIN_SUCCESS	Create a new node file.	Image Manager > Tools > Node File
IMGVECTORIZE FILENODE OPEN [FileName]	Input: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Open the specified node file. If FileName is not specified, the File Selection dialog opens.	Image Manager > Tools > Node File
IMGVECTORIZE FILENODE SAVE	NONE	KIN_ERROR KIN_SUCCESS	Save changes to the current node file.	Image Manager > Tools > Node File
IMGVECTORIZE FILENODE SAVEAS [FileName]	Input: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Save the current node file in the specified file. If FileName is not specified, the File Creation dialog opens.	Image Manager > Tools > Node File
IMGVECTORIZE FILTER GET (Filter)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the name of the current filter used by Vectorize tools.	Image Manager > Tools > Vectorize
IMGVECTORIZE FILTER SET <Filter>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the name of the current filter used by Vectorize tools.	ToolVectorize > Convert lines > Filter

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE IMGVERSION GET (version) (subversion) (revision) (subrevision)	Output: SHORT SHORT SHORT SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the required version, subversion, revision and subrevision of Descartes that should be used with this version of Vectorize.	
IMGVECTORIZE PLACE ELEMENT	NONE	KIN_SUCCESS	Start the Place Element command.	Image Manager > Tools > Vectorize
IMGVECTORIZE PLACE NODE	NONE	KIN_SUCCESS	Start the Place Nodes command.	Image Manager > Tools > Vectorize
IMGVECTORIZE PLACENODE GETBOUNDARY (Boundary)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the boundary type used by the Place Nodes command. Area types are: NONE, BLOCK, ELEMENT, FENCE, IMAGE or UNLIMITED.	Image Manager > Tools > Vectorize > Place Nodes
IMGVECTORIZE PLACENODE SETBOUNDARY < NONE BLOCK ELEMENT FENCE >	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the boundary type used by the Place Nodes command. Area types are: NONE, BLOCK, ELEMENT, FENCE, IMAGE or UNLIMITED.	Image Manager > Tools > Vectorize > Place Nodes
IMGVECTORIZE RASTERENTITY GET (RasterEntity)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the raster entity used by convert commands.	Image Manager > Tools > Vectorize
IMGVECTORIZE RASTERENTITY SET < LINE OUTLINE >	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the raster entity used by convert commands. Entity are: LINE or OUTLINE.	Image Manager > Tools > Vectorize

MicroStation Descartes Key-in Tables

Vectorize Key-In

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE RASTERLINEWIDTH GET (LineWidth)	Input: Dpoint3d address Output: DOUBLE	KIN_INVALID_PARAM KIN_NOIMAGE KIN_INVALID_POINT KIN_SUCCESS	Returns the line width of the raster line under the input given point in the active image. Returns values are in UOR.	
IMGVECTORIZE RASTERSNAP GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the current status of the "Raster Snap" toggle (ON/OFF) used by the Vectorize tools.	Image Manager > Tools > Vectorize
IMGVECTORIZE RASTERSNAP SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set the current status of the "Raster Snap" toggle to OFF.	Image Manager > Tools > Vectorize
IMGVECTORIZE RASTERSNAP SETON	NONE	KIN_ERROR KIN_SUCCESS	Set the current status of the "Raster Snap" toggle to ON.	Image Manager > Tools > Vectorize
IMGVECTORIZE SELECTTEXTFILTER GET (Filter)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the name of the current filter for the Convert Text command.	Image Manager > Tools > Text/Cells > Convert Text
IMGVECTORIZE SELECTTEXTFILTER SET <Filter>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the filter for the Convert Text command.	Idem
IMGVECTORIZE TENTATIVERASTERS NAP GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the "Tentative" toggle (ON/OFF).	Image Manager > Settings > Draw
IMGVECTORIZE TENTATIVERASTERS NAP SETOFF	NONE	KIN_SUCCESS	Set the status of the "Tentative" toggle to OFF.	Idem
IMGVECTORIZE TENTATIVERASTER- SNAP SETON	NONE	KIN_SUCCESS	Set the status of the "Tentative" toggle to ON.	Idem

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE TEXTAUTOERASE- COLOR GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the “Auto Set Eraser Color” toggle (ON/OFF).	Image Manager > Tools > Text/Cells > Convert Text
IMGVECTORIZE TEXTAUTOERASE- COLOR SETOFF	NONE	KIN_SUCCESS	Set the status of the “Auto Set Eraser Color” toggle to OFF.	Idem
IMGVECTORIZE TEXTAUTOERASE- COLOR SETON	NONE	KIN_SUCCESS	Set the status of the “Auto Set Eraser Color” toggle to ON.	Idem
IMGVECTORIZE TEXTCONVERTNOW GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the “Convert Now” toggle (ON/OFF).	Idem
IMGVECTORIZE TEXTCONVERTNOW SETOFF	NONE	KIN_SUCCESS	Set the status of the “Convert Now” toggle to OFF.	Idem
IMGVECTORIZE TEXTCONVERTNOW SETON	NONE	KIN_SUCCESS	Set the status of the “Convert Now” toggle to ON.	Idem
IMGVECTORIZE TEXTERASERASTER GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the “Erase Raster” toggle (ON/OFF).	Idem
IMGVECTORIZE TEXTERASERASTER SETOFF	NONE	KIN_SUCCESS	Set the status of the “Erase Raster” toggle to OFF.	Idem
IMGVECTORIZE TEXTERASERASTER SETON	NONE	KIN_SUCCESS	Set the status of the “Erase Raster” toggle to ON.	Idem

MicroStation Descartes Key-in Tables

Vectorize Key-In

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE TEXTERASERCOLOR GET (Color)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the current eraser color.	Idem
IMGVECTORIZE TEXTERASERCOLOR SET <Color>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the current eraser color.	Idem
IMGVECTORIZE TEXTERASERCOLOR 1BIT GET (Color)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the current eraser color for 1 bit image.	Idem
IMGVECTORIZE TEXTERASERCOLOR 1BIT SET < BACKGROUND FOREGROUND >	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the current eraser color for 1 bit image.	Idem
IMGVECTORIZE TEXTFILTER GET (Filter)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the name of the current filter for the Convert Text command.	Idem
IMGVECTORIZE TEXTFILTER SET <Filter>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the filter for the Convert Text command.	Idem
IMGVECTORIZE TEXTFIT GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the "Fit Text" toggle (ON/OFF).	Idem
IMGVECTORIZE TEXTFIT SETOFF	NONE	KIN_SUCCESS	Set the status of the "Fit Text" toggle to OFF.	Idem
IMGVECTORIZE TEXTFIT SETON	NONE	KIN_SUCCESS	Set the status of the "Fit Text" toggle to ON.	Idem
IMGVECTORIZE TEXTSHRINK GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the status of the "Shrink Selection to Text" toggle (ON/OFF).	Idem

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE TEXTSHRINK SETOFF	NONE	KIN_SUCCESS	Set the status of the "Shrink Selection to Text" toggle to OFF.	Idem
IMGVECTORIZE TEXTSHRINK SETON	NONE	KIN_SUCCESS	Set the status of the "Shrink Selection to Text" toggle to ON.	Idem
IMGVECTORIZE TEXTTHEME GET (Theme)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the name of the current theme for the Convert Text command.	Idem
IMGVECTORIZE TEXTTHEME SET <Theme>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the theme for the Convert Text command.	Idem
IMGVECTORIZE THEME GET (Theme)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the name of the current theme used by Vectorize tools.	Image Manager > Tools > Vectorize
IMGVECTORIZE THEME SET <Theme>	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the theme used by Vectorize tools.	Image Manager > Tools > Vectorize
IMGVECTORIZE TOOLNODES CLOSE	NONE	KIN_SUCCESS	Close the Node File tool box.	Image Manager > Tools > Node File
IMGVECTORIZE TOOLNODES OPEN	NONE	KIN_SUCCESS	Open the Node File tool box.	Image Manager > Tools > Node File
IMGVECTORIZE TOOLTEXTCELLS CLOSE	NONE	KIN_SUCCESS	Close the Text / Cells tool box.	Image Manager > Tools > Text / Cells
IMGVECTORIZE TOOLTEXTCELLS OPEN	NONE	KIN_SUCCESS	Open the Text / Cells tool box.	Image Manager > Tools > Text / Cells

MicroStation Descartes Key-in Tables

Vectorize Key-In

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGVECTORIZE TOOLVECTORIZE CLOSE	NONE	KIN_SUCCESS	Close the Vectorize tool box.	Image Manager > Tools > Vectorize
IMGVECTORIZE TOOLVECTORIZE OPEN	NONE	KIN_SUCCESS	Open the Vectorize tool box.	Image Manager > Tools > Vectorize
IMGVECTORIZE VECTORMODE GET (Mode)	Output: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Return the current mode for placing or continuing elements. Modes are POINT and STREAM.	Image Manager > Tools > Vectorize > Place and Continue Element
IMGVECTORIZE VECTORMODE SET < POINT STREAM >	Input: STRING	KIN_INVALID_PARAM KIN_SUCCESS	Set the current mode for placing or continuing elements. Modes are POINT and STREAM.	Idem
IMGVECTORIZE VECTORSNAP GET (Status)	Output: SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Return the current status of the "Vector Snap" toggle (ON/OFF).	Image Manager > Tools > Vectorize > Place Nodes
IMGVECTORIZE VECTORSNAP SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set the current status of the "Vector Snap" toggle to OFF.	Idem
IMGVECTORIZE VECTORSNAP SETON	NONE	KIN_ERROR KIN_SUCCESS	Set the current status of the "Vector Snap" toggle to ON.	Idem
IMGVECTORIZE VERSION GET (version) (subversion) (revision) (subrevision)	Output: SHORT SHORT SHORT SHORT	KIN_INVALID_PARAM KIN_SUCCESS	Returns the current version, subversion, revision and subrevision of Vectorize.	

Generic Plot Key-ins

Used with the “dcgen.plt” driver.

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGGENPLOT BRIGHTNESS GET (percent)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Brightness percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT BRIGHTNESS SET <percent>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Brightness percent value used for plotting.	Image Manager> Image Manager> Plot> Setup> Device
IMGGENPLOT CONTRAST GET (percent)	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Contrast percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT CONTRAST SET <percent>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Contrast percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT DIALOG OPEN	NONE	KIN_ERROR KIN_SUCCESS	Open the Generic Image Plotting Device dialog.	Image Manager> Plot> Setup> Device
IMGGENPLOT GRAYSCALE GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Get the Grayscale toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT GRAYSCALE SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Grayscale toggle used for plotting.	Image Manager> Plot> Setup> Device

MicroStation Descartes Key-in Tables

Generic Plot Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGGENPLOT GRAYSCALE SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Grayscale toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT FENCE GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Fence toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT FENCE SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Fence toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT FENCE SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Fence toggle used for plotting	Image Manager> Plot> Setup> Device
IMGGENPLOT PLOT RASTER GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Plot Raster toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT PLOT RASTER SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Plot Raster toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT PLOT RASTER SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Plot Raster toggle used for plotting	Image Manager> Plot> Setup> Device

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGGENPLOT RESOLUTION GET (resolution)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Resolution value used for plotting.	Image Manager> Plot> Setup> Device
IMGGENPLOT RESOLUTION SET <resolution>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Resolution value used for plotting.	Image Manager> Plot> Setup> Device

PostScript Plot Key-ins

Used with the “dcps.plt” driver.

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGPSLOT ANGLE GET (angle)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Angle value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT ANGLE SET <angle>	Input param: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Angle value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT BRIGHTNESS GET (percent)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Brightness percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT BRIGHTNESS SET <percent>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Brightness percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT CONTRAST GET (percent)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Contrast percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT CONTRAST SET <percent>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Contrast percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT DIALOG OPEN	NONE	KIN_ERROR KIN_SUCCESS	Open the Postscript Image Plotting Device dialog.	Image Manager> Plot> Setup> Device

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGPSLOT FENCE GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Fence toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT FENCE SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Fence toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT FENCE SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Fence toggle used for plotting	Image Manager> Plot> Setup> Device
IMGPSLOT FREQUENCY GET (frequency)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Frequency value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT FREQUENCY SET <frequency>	Input param: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Frequency value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT GRAYSCALE GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Get the Grayscale toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT GRAYSCALE SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Grayscale toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT GRAYSCALE SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Grayscale toggle used for plotting.	Image Manager> Plot> Setup> Device

MicroStation Descartes Key-in Tables

PostScript Plot Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGPSPLOT OUTPUT GET (output)	Output: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the option value for Output. Options are 8BITS and 24BITS.	Image Manager> Plot> Setup> Device
IMGPSPLOT OUTPUT SET < 8BITS 24 BITS >	Input param: STRING	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the option value for Output.	Image Manager> Plot> Setup> Device
IMGPSPLOT PLOT RASTER GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Plot Raster toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSPLOT PLOT RASTER SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Plot Raster toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGPSPLOT PLOT RASTER SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Plot Raster toggle used for plotting	Image Manager> Plot> Setup> Device
IMGPSPLOT PRINTERDEFAULT GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Printer Default toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSPLOT PRINTERDEFAULT SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Printer Default toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGPSPLOT PRINTERDEFAULT SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Printer Default toggle used for plotting.	Image Manager> Plot> Setup> Device

MicroStation Descartes Key-in Tables

PostScript Plot Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGPSLOT RESOLUTION GET (resolution)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Resolution value used for plotting.	Image Manager> Plot> Setup> Device
IMGPSLOT RESOLUTION SET <resolution>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Resolution value used for plotting.	Image Manager> Plot> Setup> Device

RTL Plot Key-ins

Used with the “dctrl.plt” driver.

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGRTLPLOT GRAYSCALE SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Grayscale toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLOT BRIGHTNESS GET (percent)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Brightness percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLOT BRIGHTNESS SET <percent>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Brightness percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLOT CONTRAST GET (percent)	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Contrast percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLOT CONTRAST SET <percent>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Contrast percent value used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLOT DIALOG OPEN	NONE	KIN_ERROR KIN_SUCCESS	Open the RTL Image Plotting Device dialog.	Image Manager> Plot> Setup> Device
IMGRTLPLOT FENCE GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Fence toggle value used for plotting.	Image Manager> Plot> Setup> Device

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGRTLPLLOT FENCE SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Fence toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLLOT FENCE SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Fence toggle used for plotting	Image Manager> Plot> Setup> Device
IMGRTLPLLOT GRAYSCALE GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Get the Grayscale toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLLOT GRAYSCALE SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Grayscale toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLLOT PLOTRASTER GET (status)	Output: SHORT	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Plot Raster toggle value used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLLOT PLOTRASTER SETOFF	NONE	KIN_ERROR KIN_SUCCESS	Set to OFF the Plot Raster toggle used for plotting.	Image Manager> Plot> Setup> Device
IMGRTLPLLOT PLOTRASTER SETON	NONE	KIN_ERROR KIN_SUCCESS	Set to ON the Plot Raster toggle used for plotting	Image Manager> Plot> Setup> Device

MicroStation Descartes Key-in Tables

RTL Plot Key-ins

Key-In	Parameters	Returned Error Codes	Description	Graphical Interface
IMGRTL PLOT RESOLUTION GET (resolution)	Output: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Return the Resolution value used for plotting.	Image Manager> Plot> Setup> Device
IMGRTL PLOT RESOLUTION SET <resolution>	Input: LONG	KIN_INVALID_PARAM KIN_ERROR KIN_SUCCESS	Set the Resolution value used for plotting.	Image Manager> Plot> Setup> Device
